

ExoProtect's Employees' Computers Database needs to manage the following:

- **Computers:** Track a unique computer ID, make, and model for each computer.
- **Employees:** Record a unique employee ID, name, and multiple skills for each employee.
- **Software Packages:** Maintain a unique software package ID and name for each package.
- **Computer Assignments:** Each computer is assigned to one employee. An employee may have zero or one computer assigned.
- **Maintenance:** Each computer is maintained by one employee. An employee can maintain multiple computers or none at all.
- **Certifications:** Employees can be certified for multiple software packages or none. Each software package must have at least one certified employee but can have many.
- **Software Installations:** Computers may have several software packages installed or none. Each software package must be installed on at least one computer and can be installed on many.
- **Installation Tracking:** The database will record the installation date for each software package and track the total number of installations per package.
